URL Monitoring Tool Crack + Full Product Key

URL Monitoring Tool is a lightweight cross-platform utility built specifically for helping you check if your server is offline. You can monitor multiple URLs in the same time and receive sound notifications each time the website appears to be offline. It sports a clean

and intuitive interface that allows users to insert URLs in the dedicated dialogs and view if they are offline by performing tests. It is possible to edit or delete the selected URLs, or clear the entire list.

Furthermore, URL Monitoring Tool is able to monitor all the URLs in the list automatically, and you are required to specify the time limit for this task (in minutes). Additionally, you can make the program display popup warning messages when

it detects errors or play sound notifications if the server is not responding. You can upload an audio file, provided that the file format is WAV. With a double-click on the selected URL, you can view additional details about the servers' connectivity issues, namely HTTP, SSH, MySQL, POP3, Telnet, and others. The application also keeps a log with details about the monitoring process and possible errors, which can be exported to a file. During our

testing we have noticed that the program carries out a task quickly and without errors throughout the entire process.

To sum things up, URL Monitoring Tool offers an intuitive working environment and useful features for helping you monitor URLs with minimum effort. The program remains light on the system resources and is suitable for beginners and professionals alike. URL Monitoring Tool

What's New In URL Monitoring Tool?

URL Monitoring Tool is a lightweight cross-platform utility built specifically for helping you check if your server

is offline. You can monitor multiple URLs in the same time and receive sound notifications each time the website appears to be offline. It sports a clean and intuitive interface that allows users to insert URLs in the dedicated dialogs and view if they are offline by performing tests. It is possible to edit or delete the selected URLs, or clear the entire list.

Furthermore, URL Monitoring Tool is able to monitor all the URLs in the list automatically,

and you are required to specify the time limit for this task (in minutes). Additionally, you can make the program display popup warning messages when it detects errors or play sound notifications if the server is not responding. You can upload an audio file, provided that the file format is WAV. With a double-click on the selected URL, you can view additional details about the servers' connectivity issues, namely HTTP, SSH, MySQL, POP3, Telnet, and

others. The application also keeps a log with details about the monitoring process and possible errors, which can be exported to a file. During our testing we have noticed that the program carries out a task quickly and without errors throughout the entire process. To sum things up, URL Monitoring Tool offers an intuitive working environment and useful features for helping you monitor URLs with minimum effort. The program

remains light on the system resources and is suitable for beginners and professionals alike. URL Monitoring Tool Features: 1) The program is able to monitor as many URLs as you wish in a single list, or simultaneously monitor up to three different lists. 2) You can insert up to 50 URLs into the main window. 3) All the monitored URLs will be displayed in the form of lists. These lists can be sorted (alphabetical, by user, by

download, etc.) according to your preference. 4) A user interface allows you to toggle between the two different views: the URL list, where you can insert new URLs, and the monitor interface, which offers all the main options for configuring the program, like opening URLs in a browser, filtering and visualizing selected URLs, etc. 5) Furthermore, it is possible to click on the monitor interface itself to launch a web browser and view the URL

directly in your favorite browser. 6) The program is able to monitor websites for up to 10 minutes. However, you can specify the exact time limit for monitoring (in minutes). 7) The

System Requirements:

Mac OS X 10.6 Snow Leopard or later. Intel-compatible processor. RAM: 512MB recommended, 1GB or greater
Free hard drive space: 300MB
DirectX 10-compatible video card (ATI Radeon, NVIDIA GeForce, or Intel) with 1 GB of RAM
Internet Explorer 8 or later. Audio: QuickTime 7 or later, SoundMAX™ or equivalent
Recommendations: View photos at 100% of their original size.
